

Your inbox is getting **INKY Pro**.

FOR ALL STAFF

We're rolling out **INKY Pro**, an AI-powered email security service that monitors for phishing, impersonation, suspicious attachments, QR-code scams, and data leaks across every inbound and outbound message. You don't need to install anything. The change you'll notice most is a small **colored banner** at the top of your emails — it tells you, at a glance, whether a message looks safe, deserves a second look, or should not be trusted.

01 The banners you'll start seeing

 Internal (coworker@yourcompany.com) Sender is inside your organization. Report This Email How to use Quarantine	 External (sender@outside.com) Sender is outside your organization. No threats found. Report This Email How to use Quarantine
 Caution: Suspicious URL · Possible Phishing Something in the message looks off. Slow down — verify before clicking. Report This Email How to use Quarantine Details	 Danger: Brand Impersonation · Likely Phish INKY believes this is a malicious message. Do not click links or open attachments. Report This Email How to use Quarantine Details
BLUE Internal sender. Routine.	GRAY External, no threats.
YELLOW Be careful — verify first.	RED Treat as malicious.

02 Quick links — built right into every banner

● Report This Email One click sends a suspicious message to our security team for review. You may be directed to an external page to provide further details.	● How to use Opens a short refresher explaining what the banner colors mean and what action to take.	● Quarantine Opens your personal spam & quarantine portal where you can review held messages, release safe ones, and block senders.
---	--	--

03 What you'll notice — and what stays the same

SMALL CHANGES YOU'LL SEE

- A **colored banner** at the top of most messages.
- Some messages may briefly hold for scanning before delivery.
- Sending a message with sensitive content may prompt you to **send it encrypted** through the INKY portal.
- You'll receive a periodic **quarantine digest** summarizing held messages.

WHAT STAYS EXACTLY THE SAME

- Your email address, password, and sign-in.
- Your inbox, folders, rules, and signatures.
- Outlook, Outlook Mobile, the web app, and Teams.
- Calendar invites, contacts, and shared mailboxes.
- How you send and reply to mail day to day.

Encryption portal for outbound mail

If you send something sensitive, INKY may route it through a secure portal so the recipient opens it safely — no setup needed on your end.

Your spam & quarantine portal

Use the *Quarantine* link in any banner to log in, review held messages, release the good ones, and adjust safe-sender preferences.

If you see Yellow or Red — pause

Don't click links or open attachments. Use *Report This Email*, then delete it. When in doubt, ask the helpdesk.

Trust the banner. Use the Quick Links.

ACTION

When a banner appears, read it before acting. **Report This Email** is the fastest way to get something looked at, and the **Quarantine** portal lets you manage held mail without opening a ticket. Banners are an extra layer and normal judgment still applies.
